

# Mosquito Larva Trap: The Bucket of Doom – How To

This DIY mosquito trap will entice females to lay eggs and Mosquito Dunks will kill the mosquito larvae before they fly.

## What You Need:

1. A 1 or 2 gallon bucket
2. Straw or grass clippings (straw is free in this garden every Sunday 9-11 am May-Oct)
3. Water
4. Mosquito Dunks or other Bti product – (available from hardware stores and online)
5. Screening for the top (to keep animals from falling in) or a stick (to help animals crawl out)

## How To:

1. Add a handful of straw or grass clippings to a 1- or 2-gallon bucket
2. Fill halfway with water
3. Add ½ of a Dunk
4. Put in sun or part sun
5. Add a reminder on your calendar to add a new ½ Dunk every 30 days
6. If the bucket fills up with rain, dump water out to keep it half-full, and add another bit of Dunk

**Important!** You still need to dump all other water sources to get rid of other breeding sites and make them lay eggs in the bucket!

**If every patio does this, what a difference it will make for all of us!**
